— MONO YARN

Mono yarn is also known as Monofilament yarn. Mono yarn is a single, continuous strand of synthetic fiber or a continuous fiber composed of 4 to 6 single fibers. The monofilament has sufficient strength and toughness to be used as a single yarn for a single yarn or a mesh. The most commonly recognized monofilament is nylon fishing line but monofilament can be used in numerous ways. Mono Yarn can be made by direct spinning or by splitting Mother Yarn. Because of its

resistance to fuel and chemicals this type of monofilaments is widely used in the production of filter fabrics for automotive use.
